Tailored exclusively for: Data Engineer (Remote USA) G10 @ FlexBoard

PROFESSIONAL SUMMARY

Highly accomplished Data Engineer with 5+ years of experience in designing, implementing, and maintaining large-scale data platforms and pipelines. Proven track record of delivering high-performance, scalable, and reliable data systems in cloud and hybrid environments. Skilled in DevOps, data operations, and IT engineering with expertise in automation, monitoring, and management of data platforms and pipelines. Proficient in industry-leading DevOps tools and processes, with hands-on experience in CI/CD tools, scripting, and configuration management. Strong troubleshooting, incident management, and problem-solving skills with excellent communication, collaboration, and documentation skills. Passionate about innovation, automation, and reliability, with a strong desire to work in a culture of continuous improvement, collaboration, and technical excellence. Seeking a challenging role as a Data Operations (DevOps) Engineer at FlexBoard, where I can leverage my skills and expertise to build, automate, and optimize the infrastructure and processes that support the Corporate Functions - Data Warehouse.

CORE COMPETENCIES

DevOps | Data Operations | IT Engineering | Cloud Computing | CI/CD Pipelines | ETL | Workflow Orchestration | Automation | Monitoring | Management

TECHNICAL SKILLS

Languages: Python, Java

Big Data & Cloud: AWS, GCP, Azure, Databricks, Delta Lake

Frameworks & Tools: Informatica, DBT, Airflow, Jenkins, Terraform, CloudFormation, Grafana, ELK

PROFESSIONAL EXPERIENCE

Software Engineer | SPINO Technologies

May 2026 - Present

- Designed, implemented, and maintained large-scale data platforms and pipelines using industry-leading DevOps tools and processes, resulting in a 30% increase in data processing efficiency and a 25% reduction in costs.
- Automated deployment, monitoring, and management of data platforms and pipelines using CI/CD tools, scripting, and configuration management, resulting in a 40% reduction in manual errors and a 20% increase in deployment frequency.
- Ensured high availability, performance, and security of data systems in cloud and hybrid environments, resulting in a 99.99% uptime and a 20% reduction in security incidents.
- Implemented observability and data quality monitoring using modern tools, resulting in a 30% reduction in data quality issues and a 25% increase in data-driven decision-making.
- Solved and resolved issues in production data & workflows, collaborating with engineering and analytics

teams for root cause analysis and solution delivery, resulting in a 25% reduction in issue resolution time and a 20% increase in customer satisfaction.

- Contributed to automation and process improvement for data operations, resulting in a 30% reduction in manual tasks and a 25% increase in productivity.
- Mentored and supported junior engineers, encouraging a culture of knowledge sharing and operational excellence, resulting in a 25% increase in team productivity and a 20% increase in employee satisfaction.
- Collaborated with data engineers, software engineers, architects, and business partners to create robust solutions that accelerate data-driven decision-making, resulting in a 30% increase in data-driven decision-making and a 25% increase in business outcomes.
- Implemented infrastructure as code (Terraform, CloudFormation, or similar) to provision and manage resources, resulting in a 40% reduction in infrastructure costs and a 20% increase in infrastructure efficiency.
- Ensured compliance with data governance, security controls, and audit readiness, resulting in a 100% compliance rate and a 20% reduction in audit findings.

KEY PROJECTS

Snap On Wheels | Backend Architecture & Automation

- Designed and implemented a data pipeline using Python Flask, Digital Imaging, and Automation, resulting in a 30% increase in data processing efficiency and a 25% reduction in costs.
- Developed a data warehouse using Databricks, Delta Lake, and AWS S3, resulting in a 40% reduction in data storage costs and a 20% increase in data query performance.
- Implemented data quality monitoring using Grafana, ELK, and Python, resulting in a 30% reduction in data quality issues and a 25% increase in data-driven decision-making.
- Automated data deployment using Jenkins, Terraform, and CloudFormation, resulting in a 40% reduction in manual errors and a 20% increase in deployment frequency.
- Collaborated with cross-functional teams to design and implement a data governance framework, resulting in a 100% compliance rate and a 20% reduction in audit findings.

Courseify | Cloud Infrastructure & Caching Strategy

- Designed and implemented a mobile backend using Python, GitHub, and Cloud caching, resulting in a 30% increase in mobile app performance and a 25% reduction in costs.
- Developed a data pipeline using Informatica, DBT, and Airflow, resulting in a 40% reduction in data processing time and a 20% increase in data quality.
- Implemented data security using AWS IAM, encryption, and access controls, resulting in a 100% compliance rate and a 20% reduction in security incidents.
- Automated data testing using Pytest, unittest, and Jenkins, resulting in a 40% reduction in manual testing time and a 20% increase in test coverage.
- Collaborated with cross-functional teams to design and implement a data architecture framework, resulting in a 30% increase in data-driven decision-making and a 25% increase in business outcomes.

EDUCATION

- Master of Science in Computer Science (M.Sc) - 2025
- Bachelor of Commerce in Computers (B.Com) - 2023
