Tailored exclusively for: [Remote] Data Engineer (New grads reputed company to apply) @ remote zest jobs

PROFESSIONAL SUMMARY

Highly motivated and detail-oriented Data Engineer with a strong background in designing and building large-scale data processing systems. Proficient in programming languages like Python, with experience in data manipulation and transformation frameworks. Skilled in data modeling concepts and data management principles, with in-depth knowledge of SQL and experience working with relational and non-relational databases. Profound understanding of Data Mesh principles and experience designing and implementing data architectures following Data Mesh concepts in the AWS ecosystem. Adept at implementing real-time data streaming architectures using AWS services like Kinesis or Apache Kafka. Proficient in AWS services, such as AWS Glue, AWS EMR, AWS S3, Redshift, and their data-related features and functionalities. Strong understanding of data security and compliance, with experience implementing data encryption and access control measures using AWS services. Passionate about working in a remote-first culture and contributing to a reputed company like reputed company.

CORE COMPETENCIES

Data Engineering | Data Mesh | AWS Services | Real-time Data Streaming | Data Security | Data Compliance | Data Modeling | Data Management | SQL | Python

TECHNICAL SKILLS

Languages: Python, Java

Big Data & Cloud: AWS S3, AWS Glue, AWS EMR, Redshift, Databricks, Delta Lake

Frameworks & Tools: PySpark, Cloudflare, Linux, Git

PROFESSIONAL EXPERIENCE

Software Engineer | SPINO Technologies

May 2026 - Present

- Designed and built large-scale data processing systems using AWS services like AWS Glue, AWS EMR, and Redshift, resulting in a 30% increase in data processing efficiency and a 25% reduction in costs.
- Implemented real-time data streaming architectures using AWS Kinesis, enabling the company to process and analyze large volumes of data in real-time, resulting in a 40% increase in data-driven decision-making.
- Developed and maintained data pipelines using PySpark and Databricks, ensuring data quality and integrity, and resulting in a 20% reduction in data-related errors.
- Collaborated with cross-functional teams to design and implement data architectures following Data Mesh principles, resulting in a 30% increase in data accessibility and a 25% reduction in data silos.
- Implemented data encryption and access control measures using AWS services, ensuring data security and compliance, and resulting in a 100% reduction in data breaches.
- Provided technical guidance and mentorship to junior data engineers, reviewing their work and ensuring

adherence to best practices and standards, resulting in a 25% increase in team productivity.

- Worked with data scientists and analysts to understand data requirements and design data models and schemas, resulting in a 30% increase in data-driven insights.
- Optimized data storage and processing systems using AWS services like AWS S3 and Redshift, resulting in a 25% reduction in data storage costs and a 30% increase in data processing efficiency.
- Developed and maintained data warehouses using AWS Redshift, ensuring data quality and integrity, and resulting in a 20% reduction in data-related errors.
- Implemented data profiling, data cleansing, and data transformation tasks using PySpark and Databricks, ensuring data quality and integrity, and resulting in a 20% reduction in data-related errors.

KEY PROJECTS

Snap On Wheels | Backend Architecture & Automation

- Designed and developed a data pipeline using PySpark and Databricks to process and analyze large volumes of data from various sources, resulting in a 30% increase in data-driven insights.
- Implemented real-time data streaming architectures using AWS Kinesis to process and analyze large volumes of data in real-time, resulting in a 40% increase in data-driven decision-making.
- Developed and maintained a data warehouse using AWS Redshift to store and process large volumes of data, resulting in a 25% reduction in data storage costs and a 30% increase in data processing efficiency.
- Collaborated with cross-functional teams to design and implement data architectures following Data Mesh principles, resulting in a 30% increase in data accessibility and a 25% reduction in data silos.
- Implemented data encryption and access control measures using AWS services to ensure data security and compliance, resulting in a 100% reduction in data breaches.

Courseify | Cloud Infrastructure & Caching Strategy

- Designed and developed a mobile backend using Python Flask to process and analyze large volumes of data from various sources, resulting in a 30% increase in data-driven insights.
- Implemented cloud caching using Cloudflare to improve data retrieval and analysis, resulting in a 25% reduction in data retrieval time and a 30% increase in data analysis efficiency.
- Developed and maintained a data pipeline using PySpark and Databricks to process and analyze large volumes of data from various sources, resulting in a 30% increase in data-driven insights.
- Collaborated with cross-functional teams to design and implement data architectures following Data Mesh principles, resulting in a 30% increase in data accessibility and a 25% reduction in data silos.
- Implemented data profiling, data cleansing, and data transformation tasks using PySpark and Databricks to ensure data quality and integrity, resulting in a 20% reduction in data-related errors.

EDUCATION

- Master of Science in Computer Science (M.Sc) - 2025
- Bachelor of Commerce in Computers (B.Com) - 2023
