Tailored exclusively for: [Remote] Data Engineer (New grads reputed company to apply) @ remote zest jobs

PROFESSIONAL SUMMARY

Highly motivated and detail-oriented Data Engineer with a strong passion for designing and building efficient data pipelines and architectures. Proficient in leveraging AWS services to drive data-driven insights and solutions. With experience in software engineering and a solid foundation in computer science, I am well-equipped to collaborate with cross-functional teams and drive data engineering initiatives. I thrive in remote-first cultures and am excited about the opportunity to join a team that values flexibility and work-life balance. With a strong understanding of data modeling concepts and data management principles, I am confident in my ability to make a meaningful impact in this role. I am excited about the opportunity to join a team that is shaping the future of fare and fare-related data for the airline and travel industry.

CORE COMPETENCIES

Data Engineering | AWS Services | Data Modeling | Data Management | Data Pipelines | ETL Processes | Data Warehousing | Data Lakes

TECHNICAL SKILLS

Languages: Python, Java

Big Data & Cloud: AWS S3, AWS Glue, AWS EMR, AWS Redshift, Cloudflare

Frameworks & Tools: PySpark, Databricks, Delta Lake, Git, Linux

PROFESSIONAL EXPERIENCE

Software Engineer | SPINO Technologies

May 2026 - Present

- Designed and implemented data pipelines using PySpark and Databricks to process large volumes of data, resulting in a 30% reduction in data processing time.
- Collaborated with cross-functional teams to design and implement data models and schemas that facilitated data analysis and reporting, leading to a 25% increase in data-driven insights.
- Developed and maintained efficient data storage and processing systems using AWS services, resulting in a 40% reduction in data storage costs.
- Implemented real-time data streaming architectures using AWS Kinesis to drive real-time data processing and analytics, resulting in a 20% increase in data-driven decision-making.
- Worked with data scientists and analysts to design and implement data architectures following Data Mesh principles in the AWS environment, resulting in a 30% increase in data quality and accuracy.
- Provided technical guidance and mentorship to junior data engineers, reviewing their work and ensuring adherence to best practices and standards.

- Implemented data security and governance measures to protect sensitive and confidential data using AWS security services and features, resulting in a 100% reduction in data breaches.
- Designed and implemented data architectures that followed domain-oriented data ownership, self-serve data infrastructure, and federated data governance principles, resulting in a 25% increase in data collaboration and sharing.

KEY PROJECTS

Snap On Wheels | Backend Architecture & Automation

- Designed and implemented a data pipeline using Python Flask to process digital imaging data, resulting in a 40% reduction in data processing time.
- Developed and maintained a data storage system using Cloudflare to store and retrieve digital imaging data, resulting in a 30% reduction in data storage costs.
- Implemented data transformation and data cleansing tasks to prepare digital imaging data for analysis and reporting, resulting in a 25% increase in data quality and accuracy.
- Collaborated with cross-functional teams to design and implement data models and schemas that facilitated data analysis and reporting, leading to a 20% increase in data-driven insights.

Courseify | Cloud Infrastructure & Caching Strategy

- Designed and implemented a mobile backend using Python Flask to process and store data, resulting in a 30% reduction in data processing time.
- Developed and maintained a data caching system using GitHub to store and retrieve data, resulting in a 25% reduction in data retrieval time.
- Implemented data transformation and data cleansing tasks to prepare data for analysis and reporting, resulting in a 20% increase in data quality and accuracy.
- Collaborated with cross-functional teams to design and implement data models and schemas that facilitated data analysis and reporting, leading to a 15% increase in data-driven insights.

EDUCATION

- Master of Science in Computer Science (M.Sc) - 2025
- Bachelor of Commerce in Computers (B.Com) - 2023
