

SINDHU SINGAMANENI

Data Engineer | Advanced SQL, dbt & Snowflake | ETL/ELT & Data Conversion | IBM DataStage
gspriya0321@gmail.com | www.linkedin.com/in/sindhu-s-b74b43367 | Dallas, TX | Open to Relocation — Cincinnati, OH | W2

PROFESSIONAL SUMMARY

Data Engineer with 5+ years of experience building and maintaining ETL/ELT pipelines, data transformations, and data migration solutions across Azure, AWS, and GCP. Hands-on expertise in Advanced SQL, T-SQL, dbt, Snowflake, and IBM DataStage for scalable data warehousing and large-scale data conversion projects. Strong data investigation and troubleshooting skills developed through Data Vault 2.0 modeling, anomaly detection, and root-cause analysis of pipeline and reporting issues. Experienced validating and reconciling complex financial datasets — including sales transactions, invoices, billing, and revenue data — under tight, conversion-focused deadlines. Comfortable collaborating with internal teams, external vendors, and business stakeholders to translate source-to-target mappings and business rules into reliable, production-ready data solutions. M.S. in Data Science, GPA 3.66.

RELEVANT SKILLS

SQL & Data Warehousing: Advanced SQL · T-SQL · ANSI SQL · dbt (data build tool) · Snowflake · Azure Synapse Analytics · Google BigQuery · Amazon Redshift

ETL/ELT & Data Integration: IBM DataStage (parallel jobs, transformations, lookups, joins, data cleansing) · Azure Data Factory (ADF) · AWS Glue · Informatica PowerCenter · Apache Airflow · CI/CD (Jenkins, GitHub) · Data Migration · Data Conversion

Data Investigation & Quality: Automated data quality validation · Anomaly detection · Data reconciliation · Root-cause analysis · Data lineage · Source-to-target mapping validation · Error handling

Financial & Transaction Data: Financial data migration · Sales transactions · Invoicing · Billing · Revenue data · Transaction processing · Data reconciliation across source and target systems

Streaming & Programming: Apache Kafka · Amazon Kinesis · Azure Event Hub · Python · PySpark · Scala · PL/SQL

Data Modeling: Data Vault 2.0 (Hubs, Links, Satellites) · Medallion Architecture · Dimensional Modeling (Star & Snowflake Schema)

Databases: PostgreSQL · MySQL · Oracle · SQL Server · MongoDB

PROFESSIONAL EXPERIENCE

Data Engineer · Interstate Batteries Oct 2023 – Jul 2026

Enterprise data platform engineering and financial data migration on Azure, Microsoft Fabric, and AWS.

- Supported data migration and data conversion initiatives involving sales invoices, billing records, customer transactions, and revenue-related financial datasets — ensuring accurate, validated, and consistent movement of data between source and target systems under tight project deadlines.
- Developed and maintained ETL/ELT pipelines to extract, transform, validate, and load transactional and financial data — building dbt models and Snowflake transformations to support scalable ELT workflows, data validation, and reconciliation across systems.
- Performed data investigation and reconciliation for migrated invoice, sales, billing, and transaction records — identifying data discrepancies, conducting root-cause analysis, and supporting timely resolution during active migration activities.
- Collaborated with business and technical teams to translate financial data requirements, source-to-target mappings, transformation rules, and validation criteria into reliable, production-ready ETL/ELT data solutions.
- Authored complex Advanced SQL and T-SQL transformations, CTEs, and window functions to build and optimize ETL/ELT pipelines — improving query performance by 45% across enterprise reporting workflows.
- Built automated data quality validation and anomaly detection frameworks at ingestion — reducing downstream data errors by 30% and strengthening data investigation and troubleshooting capabilities across all pipelines.
- Designed Data Vault 2.0 models (Hubs, Links, Satellites) and dimensional Star/Snowflake schema models to validate and reconcile complex datasets, improving reporting consistency and data lineage across business domains.

- Orchestrated automated data workflows via Apache Airflow and implemented CI/CD pipelines (Jenkins, GitHub) — cutting incident response time by 40% while delivering under tight, conversion-focused timelines.
- Maintained data governance and security through IAM, RBAC, and metadata documentation — supporting audit-ready traceability and compliance across all business domains.

ETL Developer · Wipro Jun 2021 – Jul 2023

Enterprise data warehousing, IBM DataStage ETL development, and multi-source data conversion for global clients.

- Developed and supported ETL workflows using IBM DataStage — creating and maintaining parallel jobs, transformations, lookups, joins, and data cleansing workflows to extract data from multiple source systems, apply business transformation rules, and load curated data into target databases and data warehouse environments.
- Translated source-to-target mappings and business rules into scalable IBM DataStage ETL processes — working with business and technical teams to ensure transformation logic was accurate, well-documented, and production-ready.
- Monitored and troubleshooted IBM DataStage ETL jobs — investigated data and processing issues, performed root-cause analysis, and optimized workflows to improve pipeline reliability, performance, and data quality.
- Performed data validation, error handling, and reconciliation across source and target systems — ensuring data accuracy, completeness, and consistency across multi-source integration and conversion projects for global clients.
- Developed enterprise ETL/ELT workflows using Azure Data Factory (ADF), AWS Glue, and Informatica PowerCenter — integrating Oracle, SQL Server, and cloud sources into centralized data warehouses for data conversion and migration initiatives.
- Implemented Data Vault 2.0 models (Hubs, Links, Satellites) to support scalable, historized data structures across multi-source integration and conversion projects.
- Authored and optimized Advanced SQL and T-SQL stored procedures, CTEs, and views — reducing ETL runtimes by 35% through systematic indexing, query tuning, and data investigation.
- Configured IAM roles, RBAC, and encryption policies to meet client compliance standards — embedding data governance and security from day one of each engagement.

EDUCATION

M.S. in Data Science · University of North Texas, Denton, TX · 2025 · GPA: 3.66 / 4.0

B.E. in Engineering · Gudlavalleru Engineering College · 2022 · GPA: 8.67 / 10
